

DEVELOP VISUALISE INTEGRATE

“We work together with our employees to ensure the innovative strength of our company. This is how we will remain an expert medical IT partner into the future.”

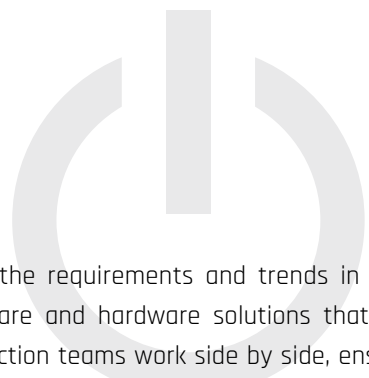

Stephan Rein, Managing Director of Rein Medical GmbH

## INNOVATION: FAMILY AFFAIR

We represent innovative solutions and products in the medical sector. We offer our customers an extensive package of hardware, software and infrastructure as well as a wide range of services and auxiliary products - all from a single source.

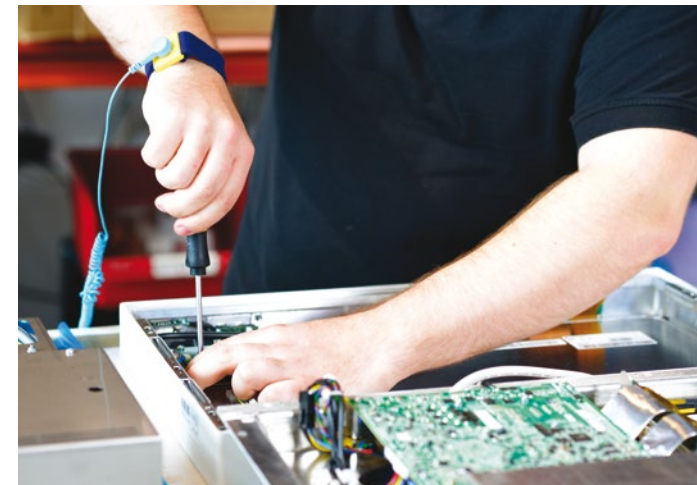

Our enthusiasm for technology has always been our driving force. The various possibilities that present themselves thanks to the current use of IT in the medical sector motivate us to continuously develop solutions that meet the requirements of our customers to a high degree, both today and into the future.

Our company has an open, team-oriented culture, and our customers benefit from this 'space for ideas'. They also benefit from flexible offers that are made into reality in a timely manner thanks to flat hierarchies. We value and respect all of our customers and business partners. Welcome to the Rein family.

We have a keen sense of the requirements and trends in the medical IT market and continuously develop software and hardware solutions that we manufacture in-house. Our development and production teams work side by side, ensuring an efficient exchange of information between teams and, as a result, the constantly high level of quality of our solutions and products.

All of our products and solutions are developed at our company headquarters in Mönchengladbach, Germany.

What does table football have to do with medical IT? Just like in a family, the very act of being together only works when everyone contributes their ideas. Space for creativity is a must and fun cannot be neglected. In order to ensure that we always find the best possible solution for our customers, we often take a step back and play a game of table football. After a quick game, we get back to the task at hand.

## DEVELOP AND PRODUCE

Our maxim is to always find the most suitable solution for our customers. Our proprietary development and production operations allow us to customise our solutions to a high degree if required.

We know the requirements of the medical market and guarantee compliance with the required safety standards. As a manufacturer, we offer our customers everything from a single source, from individual medical computer systems right through to fully integrated solutions for operating rooms.

We present our solutions at our showroom in Mönchengladbach.

All of our products and solutions are designed to achieve one goal: to facilitate and improve the everyday working lives of medical professionals and nursing staff in clinics and hospitals. For this reason, we offer end-to-end solutions that optimally network the required systems and processes. Our spectrum ranges from integrated solutions for operating rooms to medical computer systems as well as diagnostic and viewing systems right through to clinic-wide image management.

“We support our customers in every phase of an integration project, and we're always thinking about quality and profitability.”

✚ Dieter Cyganek, Managing Director of Rein Medical GmbH

# INTEGRATE AND NETWORK

In their time, diagnostic and viewing systems really sparked our interest in medical IT. Over the years, we have been able to build up and maintain extensive expertise across the entire industry. Today, our solutions set trends in other industries. For example, our integrated wall monitors are forward-looking in terms of development and design. We work together with our customers to implement complex integration projects. Manufacturer-independent consulting is part of the service we provide. At this time in a project, our customers can rely on their personal contact partner at Rein.

Our company operates all over the world. We cover the European market with our subsidiaries in Switzerland and Spain. We are also part of a network of international partners that operates beyond the borders of the region and Europe.
